# Facial Recognition Access

Open secured doors with facial recognition

TSM: Simply Smarter Security Solutions

# Facial Recognition Access

Access secured areas with the latest in facial recognition technology.

It's time for a simply smarter way to access secured areas.

The ability to effectively manage secure, safe access to secured doors is essential to the successful operations of your business. The all new facial recognition technology from TSM allows you to access secured areas and doors using your face as your key.

## Your face is your key

### Convenient

Ever had to put down a coffee or a laptop to open a door? Or fumble through your wallet or purse to find your access card? You'll love the convenience of facial recognition, and you'll never want to use an access card again.

### Secure

Access cards are regularly shared which severely compromises security. Facial recognition makes sharing impossible, and the photographic audit trail provides an indisputable record of exactly who entered when.

### Lightening Fast

The sub-second recognition process works at a glance, unlocking doors as you approach.

### Safe

Avoid workplace injuries that often occur moving goods to/from storerooms through secure doors.

### Unforgettable

Ever left your access card at home or on your desk when you went to the bathroom? Well you can't forget your face!

### Clean

Hands-free operation avoids the transmission of germs and cross contamination. Its essential in healthcare, laboratories, and manufacturing environments, and good practice in any workplace.

### Flexible

Deploy it stand-alone or integrated. On one door or hundreds.

### Affordable

Simple pay per user model designed to suit organisations of all shapes and sizes.

# Key features

Utilising a tablet mounted next to the secured door the technology constantly monitors people approaching. When a face is detected, a comparison is made with known faces to evaluate whether access should be granted.

1

## Highly Customisable

Configured access rules include support for day-of-week and time-of-day restrictions, as well as the ability to set different identification requirements at different times. For example, you can allow fast and convenient facial recognition access during business hours, while requiring a passcode or even an access card outside of these hours.

2

## Well Documented

A photographic record of all access attempts is stored in an event log that can examine it later as needed.

3

## Personalised Branding

Use your own logo and brand colours on the interface to promote your brand.

4

## Fully Integrated

Facial recognition access can be used in both stand alone and integrated configurations.
